Password: 123456

Contributions:

Adwita Gadre (33% for Alpha Release)

- Home View Screen
 - created UI
 - set up some code to start adding created timelines to Home screen
- Settings Screen
 - created UI
 - Researched and spent time figuring out how to utilize the UserDefaults and NotificationCenter in order to make app settings changes
 - Implemented and debugged font toggle
 - labels on home screen and user settings screen should change when the font button is changed from “Refani” to “System”

Audrey Chen (33% for Alpha Release)

- Set up Firebase and implemented user login and sign up
- Set up tab bar navigation for Home, Account, Inbox, and Settings pages
- Debugged git issues
- Debugged font-importing issues
- Created UI for
 - Day slideshow view
 - Day expanded view
 - Scrapbook editing page
 - Sidebar menu view (not integrated in current alpha release)

Ayushi Oswal (33% for Alpha Release)

- Set up Git repository
- Created UI For
 - Login Screen
 - Sign Up Screen (+ error checking)
 - Launch Screen
 - Timeline Creation page
 - View for within the individual Timeline
 - Timeline setting page for an individual timeline
 - User Inbox Page
 - User Account Page
- Debugging some of the font-toggling issues

Differences:

- Planned to start on the color-changing setting, however the font-setting toggle took more time than Adwita anticipated as there were some edge cases that took some time to debug. Fortunately, the functionality for changing the color should be very similar to changing the font, and the research for that setting from this release will be useful.
- Some of the segues are not properly formatted (they do not take up the full screen), this will be fixed by the next release.
- Some screens are purely UI with some placeholders (which is intended for this release) and we will need to go back in and add the proper elements to them so we can add functionality.
 - We focused on ensuring we have the necessary base visuals for each screen in this release, so we do not currently have alerts implemented for small features such as taking a photo or choosing from the user's gallery.
- Audrey created a working sidebar navigation menu for our toggle feature, but we still need to figure out a way to fully integrate it. So instead, we swapped out that finalized functionality for setting up Firebase authentication.
 - Logging out functionality is currently not yet implemented.
